Buried Line Locator

Underground Pipe & Cable Locator

Australia's
Most Popular
Underground Locator
Over 1000 Sold

*Buried Line Locator has received wide acclaim in Australia
simplifying Pipe & Cable Tracing*

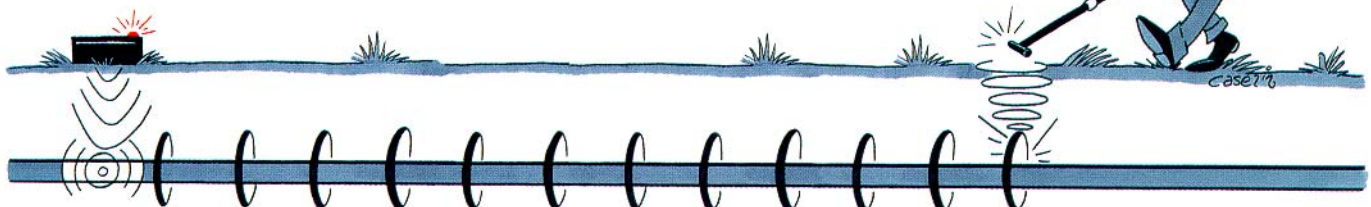

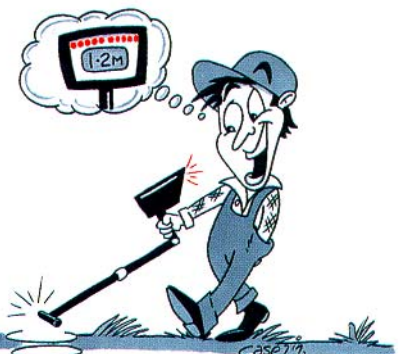

It's easy to operate - even for the novice!

- Depth at the push of a button -

- EXCAVATORS** Trace Underground Services and don't dig them up!
- ELECTRICIANS** Find Live or Dead Power Cables also Shorted & Grounded Faults even High-Resistance / Break-Down Faults
- PLUMBERS** Locate Blocked Drains by utilising your 'clearing-cable'
- BUILDERS** Detect what is Underground prior to Construction

<i>Traces Underground</i>	Power, Telephone, Coax, Irrigation Cables and other metal cables
<i>Non-Metallic</i>	Pipes with 'Trace Wires' (such as High-Pressure Gas Lines) and even Poly pipes (such as Irrigation Pipes) or Drains where a 'trace cable' can be inserted
<i>Depth</i>	Reading <i>at the push of a button</i> up to 5 metres
<i>Passive Mode</i>	Can Trace Without Transmitter
<i>LCD & LED</i>	Signal Strength for Utmost Accuracy
<i>Auto Gain</i>	Eliminates Manual Adjustments
<i>Easy</i>	To Operate
<i>Warranty</i>	2 Years

Description

The Buried Line Locator has many varied applications, encompassing Excavators, Plumbers, Electricians, Drainage, Irrigators, Telecoms & Energy Authorities.

By using new technology, the Buried Line Locator simplifies Pipe & Cable Tracing and the locating of Underground Cable Faults.

The unit's Transmitter uses low current output and a specifically tuned frequency to ensure against disturbing lines with equipment connected.

The low power requirement also allows both the Transmitter and Receiver to operate on standard "AA" size batteries.

The Receiver's audible tone is used for quick tracing. The LCD & LED display pin-points exact line location and depth measurement.

If the signal is lost, the auto-gain can be reset at any time by pushing the "signal reset" button. This will immediately allow you to re-locate the line.

A warning sound is emitted from the Receiver if it is left on when not in use.

Buried Line Locator comes complete with Receiver, Transmitter, Carry Case, Batteries, Inductive Clamp, Connection Leads, Ground Extension Lead, Ground Stake, Power & Phone Connection Adaptors, Instruction DVD & Manual.

Applications

There are various ways the Buried Line Locator can be used -

Passive Mode (Using Receiver only)

Used where depth is not required and the trace target is of sufficient size

Inductive Mode (Using Transmitter)

Again used where the trace target is of sufficient size - transmitter simply placed on ground above target, inducing its unique signal into the cable or metal pipe to be traced

Direct Connection Mode (Using Transmitter with leads / adaptors)

Used where the trace target is small such as trace wires used for high pressure gas / 2 pair residential phone cable (adaptor supplied) / metal pipes / lighting & irrigation wiring / residential power cable (live up to 600Volts - adaptor supplied)

Direct Connection Mode (Using Transmitter with Clamp)

Easy way to send signal down power & phone cables

Specifications

RECEIVER

Power	: 4x "AA" Alkaline Batteries (included)
Depth Measurement	: 5 metres (1cm increments)
Trace Mode Freq.	: 33.3KHz
Passive Mode Freq.	: 12Hz -24KHz
Operating Temp.	: -17° to 50°C
Length	: 1 metre (shaft fully extended)
Weight	: 800g (with Batteries)

TRANSMITTER

Power	: 4x "AA" Alkaline Batteries (included)
'Live' Withstand	: 600 Volts
Current	: 13mA (Open Line) / 150mA (Live or Shorted Line)
Frequency	: 33.3 KHz
Operating Temp.	: -17° to 50°C
Size	: 190 x 100 x 40 mm
Weight	: 600g (with Batteries)

FAQ on Buried Line Locator

Is it easy to use?

Very easy, and the Instruction DVD covers all aspects of operation

Will it trace something under concrete?

Yes -Concrete or 5 metres of soil

Can it trace something without making a direct connection to that service?

Yes - by using the 'Passive-Mode'

Can it trace Plastic or Ceramic Pipes?

No - not by itself, but many plumbers trace these types of non-metallic pipes by inserting an 'electric eel' and then trace it to determine the route of the pipe

How does it locate Blocked Drains?

Similarly to using an 'electric eel' to trace Plastic Pipes - and where the tracing ends is the location of the blockage - [view Instruction DVD](#)

Will it trace Optical Fibre Cable?

No - but our EMS Marker Locator will

Can it be use as a Gold Detector?

Sorry, No

Can it locate Leaking Water Pipes?

No - but we have equipment that will - visit www.picaust.com

Can it discriminate between different services - say between Power & Water?

Yes - by means of the signal strength - [view Instruction DVD](#)

I know it gives depth reading to 5 metres but what distance will it trace?

In 'Trace-Mode' and directly connecting to an insulated service such as phone or power, then kms is possible - for something like a water pipe then hundreds of metres

- in 'passive-mode' (without the use of its transmitter) - there's no distance limit

How accurate is the depth reading?

Very accurate – dependent on a strong signal (the receiver '+' signal boost symbol must not be showing if depth accuracy is important)

To trace a water pipe, do I simply put the 'Clamp' around the tap?

No, use the Connection Leads - one to the tap & other to the Ground Stake
(Clamp is for use with insulated services such as power & phone cables)

Can it locate Floor-Heating Cable?

Yes - however our Power Trace unit is usually a better solution
- as it can also pin-point faults in floor-heating cables

What other instrument can assist in locating Underground Faults?

Cable Fault Locator Model: TDR-44 - providing a graphical display giving distant to faults up to 3000metres
- for more details visit www.picaust.com

Why are adaptors for Power & Phone supplied?

Simply to provide an easy connection to these services if it's applicable

What do others think of the Buried Line Locator?

There are many whom, after buying one, have purchased more...

- Tenix Maintenance Services (45) / Grampians Wimmera Mallee Water (6) / DKM Earthworks (4)
EB Direct Drilling & Trenching (4) / East Bobcat, Backhoe & Truck Hire (4) / Jaco Trenching (3)
Underground Asset Group (3) / TAB Communications (3) / Coyne's Under Road Boring (2)
John Holland Group (2) / Wollongong City Council (2) / Ken Pearce Plumbing (2) / Kellyco Electrical Services (2)

THIS SPEAKS FOR ITSELF!

How reliable is it?

Buried Line Locator has a 2 Year Warranty
(and there are many who use it every day, trouble-free for years)
